# Concise Statement Under 37 CFR 1.98(3)(i):

X The following is a concise explanation of the relevance, as it is presently understood by the individual most knowledgeable about the content of the information, of each patent, publication, or other information listed that is not in the English language:

ALL REFERENCES CONSIDERED EXCEPT WHERE LINED THROUGH. /J.H./

JP 2001-166259 -- A display with a light shield means is divided into three areas. A light shield part of the light shield means can be moved, area by area, by ¼ of the light shield part pitch. In the ¼ movement, an image passes corresponding to individual ranges after 'shifting'. A video display surface is also divided into areas corresponding to the mentioned area divisions and the display order of striped left-and right-eye images is controlled by the areas. The ¼ movement is not performed in an area H2 but in areas H1 and H3. Further, only in the area H1, the left- and right-eye images are switched. In this case, the right-eye image passes through L1' from the area H1 and enters the right eye of the observer, the right eye-image oases through R2 from the area H2 and enters the right eye, and the right-eye image passes through R2' from the area H3 and enters the right eye. Thus, only the right eye image can be supplied to the right eye of the observer having moved back from optimum observation position D.
